Inc.**

No entry or load rating too large!

**Part of the
Good Air
Solution**

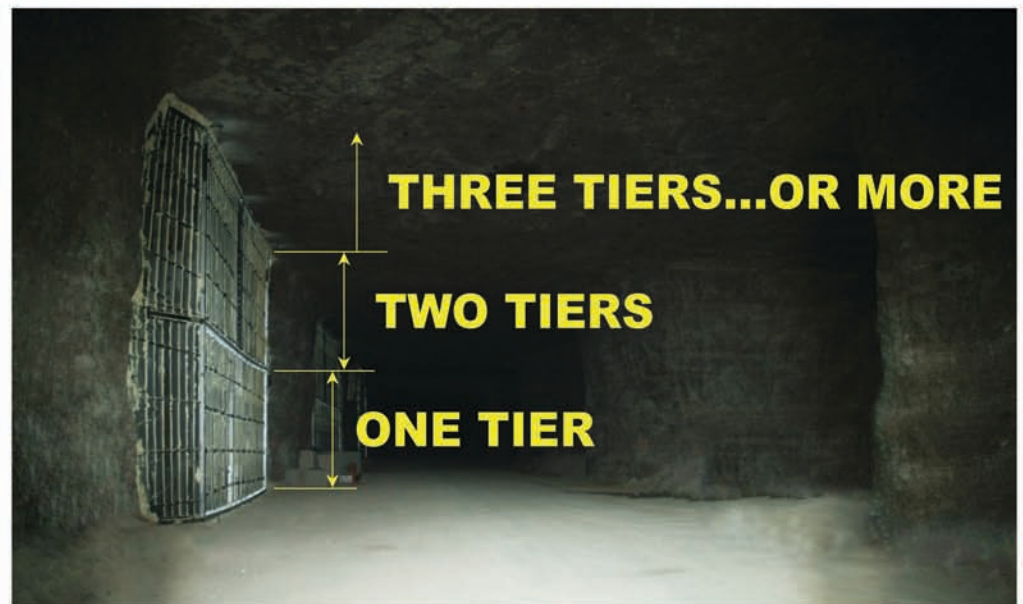

Introduction

Kennedy steel stoppings are not just used in coal mines. In fact, we have products in metal/non-metal mines all over the country served by our numerous warehouses & distribution networks.

Standard Panels with Stackable Design

Stacking multiple tiers of stopping panels with telescopic frame members allow any stopping height to be constructed with ease.

Telescopic Framework for Any Width

Horizontal supports telescope rib to rib and/or between columns to allow large structures to be constructed with relatively lightweight components fitting various entry sizes.

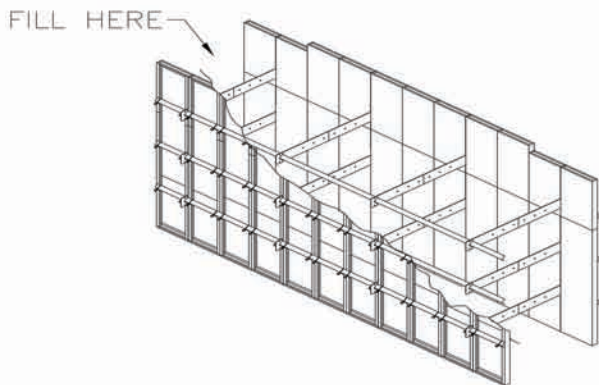

Blast Resistant Designs

Reinforced frame system to resist deformation caused by close proximity blasting.

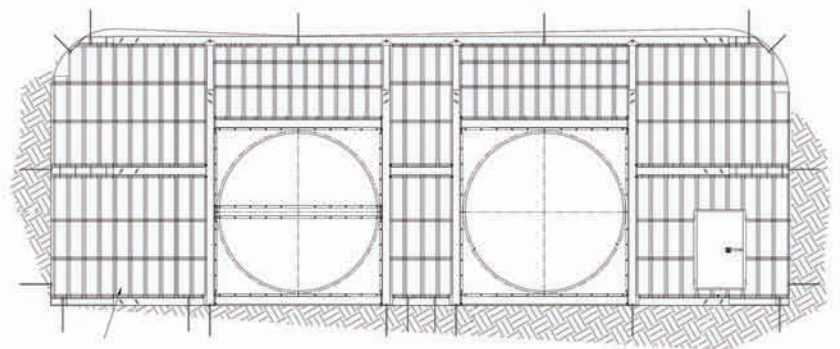

1.4 PSI (39 IWG) blast resistant stopping under construction

Plug Seals for Refuse Containment

Unique “double wall” construction filled with foamed concrete to seal off old works to be used for refuse & effluent containment such as flyash, wastewater slurry, etc... up to and including full head liquid pressure.

Fan Bulkheads, Machine Doors & More....

Manual machine doors, powered machine doors, man doors, fan bulkheads and combinations of any of these are possible with the Kennedy system.
